

# **STUDENT INDUSTRIAL INTERNSHIP PROGRAMME LOGBOOK**

**Student Name : Saanjiv Kumar Nayar A/L Ravindran Kumar**

**Matric ID : 22001781**

**Programme : Computer Engineering**

**Place of Training : KLCC**

**Period of Training : 4 Months**

**Project Title: GRA Power Apps**

## Student Industrial Training - SIT

**SIP COURSE OUTLINE**

|                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                |

|--|-----------|------------------------------------------------------------------------|
|  | 10/2/2026 | Testing and troubleshooting issues related to the Power Apps platform. |
|  | 12/2/2026 | Continuation for PTS and PBTR comparison system.                       |

# **SIP LOGBOOK REPORT**

## **WEEK 1 TO 6**

**DETAIL REPORT****WEEK NO: 1 – 6****Week 1 (Date): 5/1/2026****Objective(s) of the activities:**

- Planning and designing GRA Power Apps Platform

**Contents:**

- the design of the application was done with TA Focal Zaieri to ensure all the needed information for the application can be included in the development
- Information like what kind of department documentation and files would be included and many more information we shared and prioritized during the development of the planning for this
- This platform is built on Power Apps, but various features need another software such as Microsoft Power Automate and Microsoft Lists

*(make copies if necessary)*

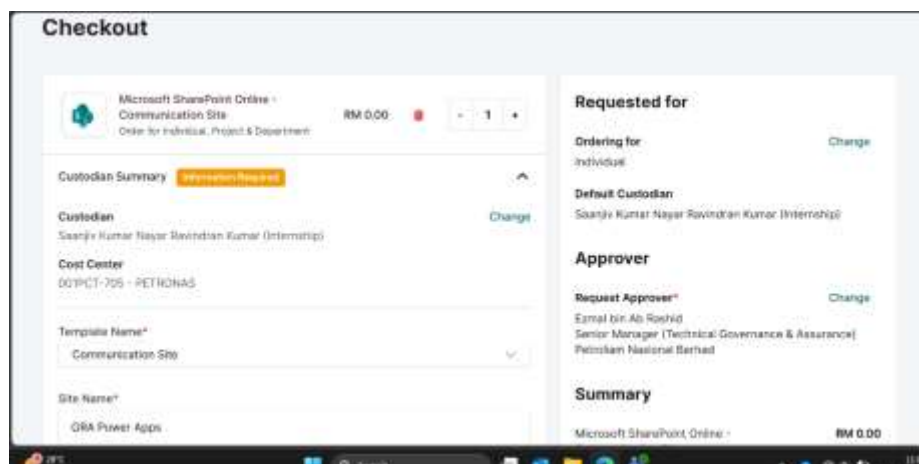

**DETAIL REPORT****WEEK NO: 1 – 6****Week 1 (Date): 6/1/2026**

Objective(s) of the activities:

- Experimenting with Power Apps interface

Contents:

- Testing and try and error base approach was done in Power Apps to identify how the application for GRA should be built
- Various templates and features were tested to identify the effectiveness of its usability
- SharePoint was also created to act as a database for the application
- The database would be the location where all the files, templates, request forms and more will be stored and recorded

*(make copies if necessary)*

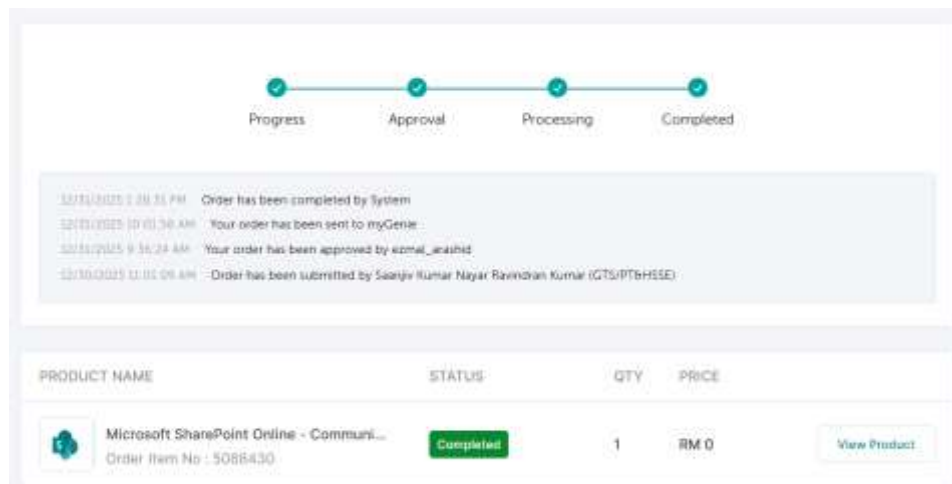

**DETAIL REPORT****WEEK NO: 1 – 6****Week 1 (Date): 8/1/2026**

Objective(s) of the activities:

- Approval of SharePoint creation

Contents:

- The approval of the SharePoint was given by the senior manager of TGA, Ezmal
- After the approval, the ICT department will have to process the request and once complete the link for the SharePoint will be released and submitted to me for access

*(make copies if necessary)***DETAIL REPORT****WEEK NO: 1 – 6**

**Week 2 (Date): 12/1/2026****Objective(s) of the activities:**

- Meeting discussing upcoming DEX Strategic Alignment Day 2026
- New task for Power Automate system

**Contents:**

- First discussion on the upcoming event called DEX Strategic Alignment Day 2026 which will be held by both GTS and GPD departments
- This discussion focuses on various things such as the games that have been suggested to be played, the itinerary for the days and division of tasks.
- I was involved in the task of finding the vendor for the creation of shirts for the event
- I was also involved in hosting and conducting a few of the games during the activity sessions
- A new task was also provided for me which was a continuation based on the previous project
- This task was to utilize Power Automate, which is a automatic flow-based platform under Microsoft to carry out comparisons for two types of documents which are PBTR and PTS
- The comparison was previously done via code which resulted in overfitting of the clauses compared
- The Power Automate method is supposed to be the way forward to carrying out this task efficiently

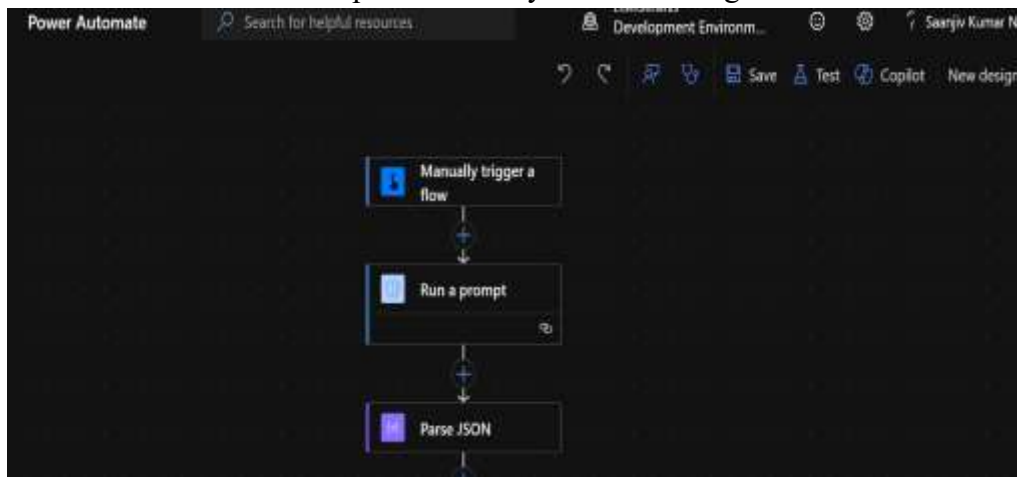

*(make copies if necessary)*

**Week 2 (Date): 13/1/2026****Objective(s) of the activities:**

- Update in Power Automate system for PTS and PBTR comparison

**Contents:**

- Based on the survey, information gathered on the way forward using Power Automate is doable
- This system will use Power Automate for users to insert in both PTS and PBTR document into it allowing for the extraction of the keywords then using the build AI models the comparison between those words will be made.
- This will result in the results of the documents being similar or not.
- This is the base concept of the system allowing this task to be done

**Week 2 (Date): 15/1/2026****Objective(s) of the activities:**

- Dry run for upcoming DEX Strategic Alignment Day 2026

**Contents:**

- After the games have been decided before being proposed to the higher ups the games were tested by the committee
- This is to ensure the game is suitable for the given occasion and time limit ensuring the game can be easily proposed and passed
- The committee was then divided into groups to play out the games, the feedback was drawn from it
- Updates on the shirt for the event were given, and the process had to be speed up as the event date was not too far away
- One of the games that were tested was to design a bridge using ice cream sticks
- This game tested the participants on their division of task, handling pressure and time management skills

**DETAIL REPORT**

**WEEK NO: 1 – 6**

**Week 3 (Date): 19/1/2026**

Objective(s) of the activities:

- DEX Strategic Alignment Day 2026 (Day 1)

Contents:

- Assisted in the distribution and sorting of the participants shirt collection at the registration counter
- Assisted in the first team building activity which was a Bingo based game involving all participants
- Assisted the committee team in arranging and cleaning up after all activities have ended and preparing for the next day activities

*(make copies if necessary)*

**DETAIL REPORT****WEEK NO: 1 – 6****Week 3 (Date): 20/1/2026**

Objective(s) of the activities:

- DEX Strategic Alignment Day 2026 (Day 2 )

Contents:

- Assisted in leading the second team building game which comprises of three stations and only allowed the participants to progress to another station if previous stations are completed
- Each team consisted of 8 to 9 members which were comprised of different levels of positions such as managers, senior managers and more
- Each team had a set time limit to complete the three stations before, arks were calculated and other teams had a chance to play the games
- Moving on the next activity held was a game to construct a bridge from basic materials provided such as ice cream sticks and more
- Our group first discussed the various roles everyone will take and how each other will work together simultaneously to build the bridge
- The final design will be presented the following day to the LTs
- After all activities and completed, I had the tasks to complete and update the slides that were going to be used the following day for the various sessions
- Once completed the slides the slides were shared and communicated with the person in charge in handling the display of the slides

*(make copies if necessary)*

**DETAIL REPORT****WEEK NO: 1 – 6****Week 3 (Date): 21/1/2026****Objective(s) of the activities:**

- DEX Strategic Alignment Day 2026 (Day 3)

**Contents:**

- Assisted in leading the Speak Up Session for the third day, which was a set of activities designed to engage all participants to voice their honest concerns and opinions based on the undergoing transformation PETRONAS is experiencing
- The first activity is a session where participants in the same group as before, were given flip charts for each team and a few sticker sand markers / they were tasked to paste the stickers on a quadrant shape chart to express their thoughts and feelings based on the questions given. After this was completed, I was tasked in analyzing these results with the aid of AI engines to draw a conclusion from various groups' answers
- The second activity was done via an excel notebook distributed to all group leaders where each team had to list and explain the strengths and weaknesses from the previous activities using the 5WH method, which is Who, What, Where, Why and How. Then like the first activity a conclusion was analyzed by me with the help of AI
- These conclusions were then inserted into a prepared slide where the slides were then display for the view of all participants including Leadership Team 9LT
- The conclusions and points drawn from the activities were then elaborated and discussed by the LT in an open discussion manner with the participants
- Lastly after this session was over, I was tasked to summarize and draw five main points from the entire activity and inputs earlier to be discussed later in a separate session after the lunch break
- After this session there was a continuation of the previous day activity to display and present the Bridge constructed from various basic materials
- I and a fellow groupmate had presented our design and construction to the LT nd also elaborated on various engineering principles and also how the task was distributed accordingly

*(make copies if necessary)*

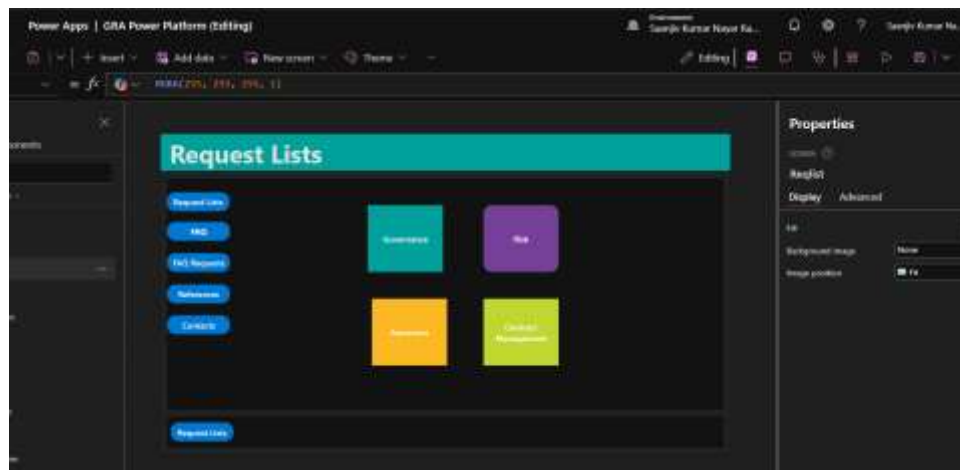

**DETAIL REPORT****WEEK NO: 1 – 6****Week 3 (Date): 23/1/2026**

Objective(s) of the activities:

- Developing GRA Power App Platform

Contents:

- Improved and added new design to the existing GRA Power App
- I wanted to create a more professional and user-friendly look to ensure the professionalism of the application
- All designs were in custom to the PTERONAS branding, which meant it followed the specific fonts, colour code and more
- Redirected and coded the buttons to allow each button to work and direct to the specific use or page when clicked on it

*(make copies if necessary)*

**DETAIL REPORT****WEEK NO: 1 – 6****Week 4 (Date): 27/1/2026**

## Objective(s) of the activities:

- Update on Power Automate System for PTS and PBTR comparison

## Contents:

- This project was done by a previous intern where two types of documents which are called PTS and PBTR respectively were supposed to be compared to find the similarities in the clauses within both documents
- The previous approach was using python code which had many limitations including the inability to access online APIs, unable to connect to web applications and more which resulted in the comparison to be less accurate and reliable
- After a few discussions with the TG team a new method was discovered where the use of Power Automate flow with the application of built in AI models can help with this issue
- Hence the development of this system would need the mastering of power automate system and the use of its AI models
- Simultaneously a deck must be prepared to show and present this new approach for this task
- The focal leading this would be Suffian under the TG team

*(make copies if necessary)*

**DETAIL REPORT**

**WEEK NO: 1 – 6**

**Week 4 (Date): 28/1/2026**

Objective(s) of the activities:

- Update on pack presentation for Power Automate system

Contents:

- The pack that is needed to be prepared to be preserved was created by Suffian as the master deck
- My part was added to the pack to explain the Power Automate system proposed and how this approach would provide better results
- Information such as how many documents of PTS and PBTR can be input in a single time, how the system would extract the key words for the comparison and more were highlighted in the pack to ensure when presented the audience would clearly understand this method

*(make copies if necessary)*

**DETAIL REPORT****WEEK NO: 1 – 6****Week 4 (Date): 30/1/2026****Objective(s) of the activities:**

- Update on pack presentation for Power Automate system

**Contents:**

- After the information needed was added into the pack, Suffian had to go through all the new added information and review it
- A meeting was held to edit the package to ensure all information was updated to the latest version
- After the pack was updated, the pack was presented to the senior manager of TGA Ezmal to get his approval of the content
- This pack will then be presented to a panel of cadence later on for the way forward for this project

**DETAIL REPORT****WEEK NO: 1 – 6****Week 5 (Date): 2/2/2026**

## Objective(s) of the activities:

- Update on PTS and PBTR comparison system
- Update on SharePoint approval and access from ICT

## Contents:

- After testing out the Power Automate and its AI models, they begin to create the flow where the excel sheets can be uploaded by the Power Automate system
- This system is connected to a SharePoint where the documents will be stored, and this is where the PTS and PBTR documents will be uploaded from
- The main goal from this stage is to ensure the extraction of the keywords is efficient for the comparison later
- The end goal of the system is to compare multiple PTS to multiple PNBTR documents to analyze their similarities among them all
- After the approval of SharePoint, ICT department is yet to provide me with the link for SharePoint, hence I contacted a focal from the department to address the issue
- This is crucial as this SharePoint is important for all further features in my Power Apps project

*(make copies if necessary)*

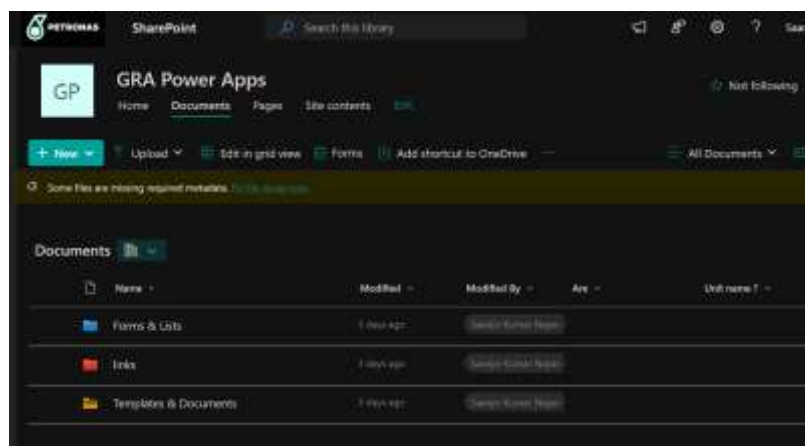

**DETAIL REPORT****WEEK NO: 1 – 6****Week 5 (Date):3/2/2026**

Objective(s) of the activities:

- Approval of access to SharePoint for Power App
- Testing and finding best method to create form request in Power Apps

Contents:

- After contacting the ICT department focal, the link to the SharePoint was provided and I had full access to it
- This allowed me to proceed with other features in my Power Apps like the request from feature which is a crucial part of the project
- With this feature focals from outside the department and division can easily request for their respective needs via this platform and their request can also be easily sent to the requested focal within the department fast
- To create this a few methods were searched and tested as this form needs to be integrated with SharePoint and also Power Apps itself
- The method involving Microsoft Forms and Microsoft Lists was chosen as this method directed users to the form easiest for to fill in

(make copies if necessary)

**DETAIL REPORT****WEEK NO: 1 – 6**

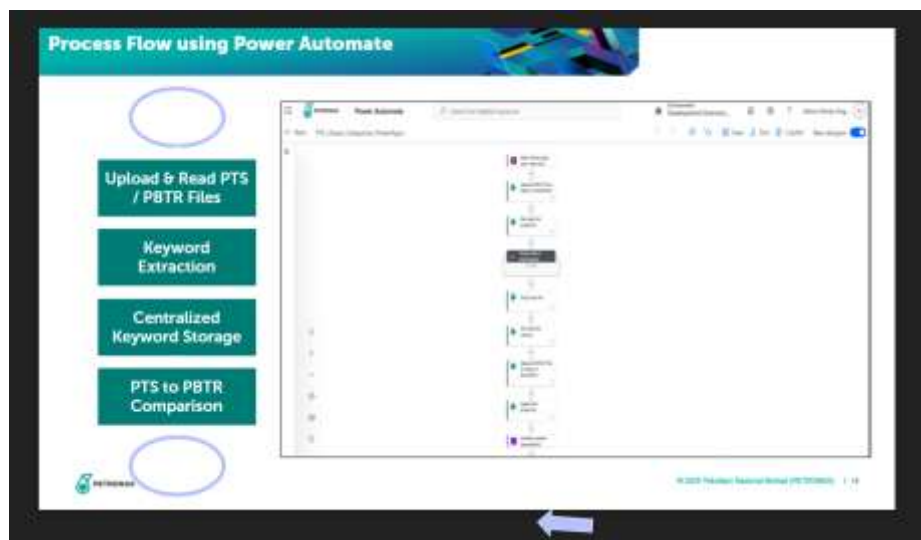

Week 5 (Date):

Objective(s) of the activities:

- Power Automate system testing and updates

Contents:

- The system was structured and designed to be created
- Using the guidance of tutorials and Chat GPT the system was designed and tested
- Many issues such as the location of files, connecting to the designated SharePoint and more were faced and resolved
- The system was yet to be ready for the actual testing of PTS and PBTR document, but the first phase was completed
- These updates were then sent to the focal in charge Suffian as he would be responsible of informing and updating the Senior Manager Ezmal on the current updates for this project

*(make copies if necessary)*

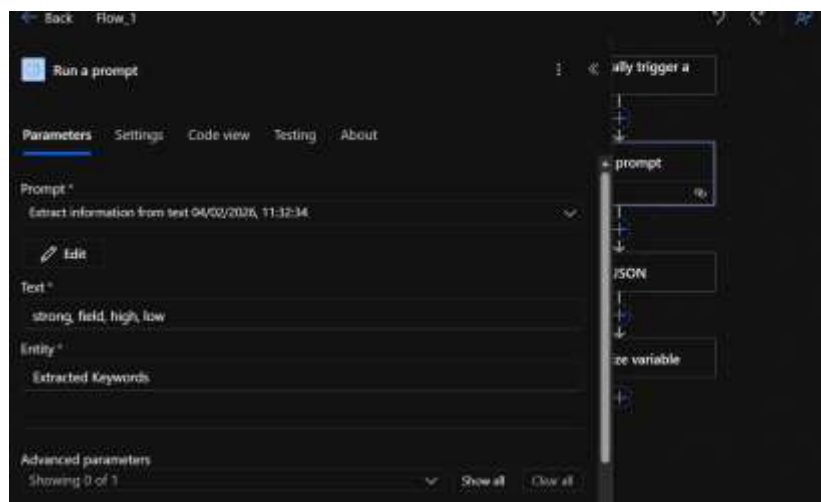

**DETAIL REPORT****WEEK NO: 1 – 6****Week 6 (Date): 9/2/2026**

## Objective(s) of the activities:

- Continuation on creation of form request for GRA Power Apps
- Continuation for Power Automate system for PTS and PBTR comparison

## Contents:

- The process of creating the form request system is long as it requires the connection of a few platforms to get it working
- The Microsoft Forms must be connected to the Microsoft List which acts as its database present in SharePoint and this connection is done via Power Automate
- The system connection via Power Automate is tricky as linking the two platforms needs to be done specifically to avoid errors while testing
- For the comparison system the flow of the Power Automate is still in progress and advancements have been made
- The type of AI model which is crucial for the comparison part has been added, which is called run a prompt
- This model allows for text extraction to be done so the text later can be compared the two documents to result in similarity.

*(make copies if necessary)*

**DETAIL REPORT****WEEK NO: 1 – 6****Week 6 (Date): 10/2/2026**

## Objective(s) of the activities:

- Testing and troubleshooting issue related to the Power Apps platform

## Contents:

- After the set up for the request from submission was complete, the system was tested to ensure it worked efficiently and smoothly
- A few errors occurred during the testing as some data was appearing correctly on the Microsoft List platform which resulted in troubleshooting of the issue
- After this step, the next step would create a tracking system for the request itself
- This tracking system would allow users to view the status of their request, get confirmation on their request when needed and receive reminders for any pending task based on that request

*(make copies if necessary)*

**DETAIL REPORT****WEEK NO: 1 – 6****Week 6 (Date): 12/2/2026**

## Objective(s) of the activities:

- Continuation for PTS and PBTR comparison system

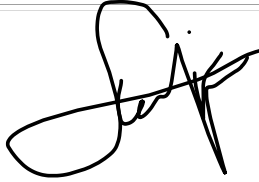

## Contents:

- After setting up the system for the AI model to be used, the system required the information to be parsed as Json to the next step for the comparison part
- This is because the model would read and interpret JSON better which would result in better comparison
- After adding this part we have to initialize the variables for the system in order to carry out the comparison
- The end goal of the system is to be able to upload multiple documents of PTS and PBTR at once and have the comparison to be done
- The result would display and show the similarities of each PTS in row format against each PBTR in column format
- The current updates were provided to the local Suffian to be updates to the senior manager on the progress of the task

*(make copies if necessary)*
